

Muscle Pathologies

You will be assigned a type of muscle pathology. First, you must research the topic. Be sure to use credible sources (NIH, CDC, Mayo Clinic, etc.) During your research, you should be compiling useful information addressing the following:

What is it?

What are causes?

Risk Factors

Symptoms

Prevalence

Demographics

Treatment

Prevention

Anything else you find interesting

Once you have completed researching, you will create an informational flyer about your muscle pathology to be presented to the class. Make sure you prepare for your presentation as well.
